**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-9, drawn to electronic digital logic circuit, classified in class 326, subclass 30.
  - II. Claims 10-21, drawn to error detection/correction and fault detection/recovery, classified in class 714, subclass 724+.
  - III. Claims 22-24, drawn to processing architectures & instruction processing, classified in class 712, subclass 1+.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the device comprising a first and a second circuit to determine a resistance is not intended to be used together with the apparatus comprising a test block to determine a condition on a chip. The device and the apparatus in groups I and II are not intended to be used with the machine readable medium having instructions stored therein.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2819

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, and the search for group I or II is not required for group III, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
